# **Network RTK in Northern and Central Europe**

Edited by

Andreas Engfeldt

L A N T M Ä T E R I E T

## Preface

This short report gives an overview of the operational Network RTK services in Northern and Central Europe, February-March 2005.

The information has been collected from a questionnaire which was distributed to 14 different networks, of which all have answered.

Many thanks to the contact persons for the Network RTK services, who have spent some time filling in the questionnaires.

# **Network RTK in Northern and Central Europe**

## **1. Networks and services, a short summary**

In Northern and Central Europe there are services for Network RTK in the following countries:

Austria (APOS),

Belgium (FLEPOS and WALCORS),

Denmark (GPSNet.dk and GPS-Referencen),

Finland (GPSNet.fi),

Germany (ASCOS and SAPOS™ (the service is called HEPS)),

Great Britain (Ordnance Survey RTK Network),

the Nederlands (06-GPS),

Norway (SATREF™ (the service is called CPOS)),

Sweden (SWEPOS™),

Switzerland (swipos™ (based on the AGNES network) and SWISSAT).

There is a mixture of private and governmental services. In the chapters below the characteristics for the networks and services are shown.

## 2. Network operators

| <b>Networks</b>                                   | <b>Owners</b>  | <b>Financing</b>   | <b>Service started</b> |
|---|--|--|------------------------|
| <b>APOS, the Austrian network</b>                 | The Federal Office of Metrology and Surveying of Austria (Bundesamt für Eich- und Vermessungswesen – BEV)  | At present APOS is financed from the federal budget  | It will start in 2006  |
| <b>FLEPOS, the Flemish network</b>                | Support Center for GIS Flanders (department of the Flemish Land Agency)  | Governmental   | October 2002           |
| <b>WALCORS, the Wallonie network</b>              | MET, Ministry of the Equipment and Transports in the Walloon region  | Governmental   | End of 2003            |
| <b>GPSNet.dk, one of the Danish networks</b>      | Trimble Center Denmark A/S – a 100% privately owned company  | 100% private investment by Trimble Center Denmark A/S  | Early 2001             |
| <b>GPS-Referencen, one of the Danish networks</b> | GPS-Referencen is responsible for the network and the distribution and has made an agreement with Leica Geosystems as administrator and provider of service to the network | GPS-Referencen A.m.b.a. is a co-operative society by companies owning the participating reference stations | In June 2001           |
| <b>GPSNet.fi, the Finnish network</b>             | Geotrim Ltd  | By user fees   | 2000-2001              |
| <b>ASCOS, one of the German networks</b>          | E.ON Ruhrgas AG, an international gas company  | Financed by E.ON Ruhrgas AG / by the charges of their customers  | 1999                   |

| <b>Networks</b>   | <b>Owners</b>  | <b>Financing</b>   | <b>Service started</b>   |
|---|--|--|--|
| <b>SAPOS,<br/>one of the<br/>German<br/>networks</b>                        | The Working Committee of the Surveying Authorities of the States of the Federal Republic of Germany (Arbeitsgemeinschaft der Vermessungsverwaltungen der Länder der Bundesrepublik Deutschland, AdV). Each state provides its own stations. For nation-wide users there exist the Central Bureau SAPOS, which coordinates SAPOS Germany-wide | SAPOS is a governmental positioning service. SAPOS users have to pay a utilization fee | First stations in 1992. Official start of SAPOS in 1998. Since 2002/2003 there is a Germany-wide network of reference stations. Three different services: HEPS (cm-accuracy, and the one which is considered here), EPS (m-accuracy) and GPPS/GHPS (post processing) |
| <b>Ordnance<br/>Survey<br/>RTK<br/>Network,<br/>the British<br/>network</b> | Ordnance Survey, the Government Agency responsible for national mapping and geodesy in Great Britain   | By Ordnance Survey   | At moment not a service, it is now only used by Ordnance Survey  |
| <b>06-GPS, the<br/>Dutch<br/>network</b>                                    | 06-GPS, a (small) private firm   | By private funds/investments   | In September 2002 and had national coverage in January 2003  |
| <b>SATREF,<br/>the<br/>Norwegian<br/>network</b>                            | Statens Kartverk, the Norwegian Mapping Authorities  | User fees  | Three different services: MPOS for m-accuracy, DPOS for dm-accuracy (Network DGPS) and CPOS for cm-accuracy. Test from autumn 2001, first customer in August 2002. The rest is about CPOS  |
| <b>SWEPOS,<br/>the<br/>Swedish<br/>network</b>                              | Lantmäteriet, National Land Survey, the mapping authorities of Sweden  | User fees and governmental funds   | The first stations were up in 1993, the RTK service started in January 2004, but RTK projects for the service area have been going on since 2000   |

| <b>Networks</b>                                       | <b>Owners</b> | <b>Financing</b> | <b>Service started</b>  |
|---|---------------|------------------|---|
| <b>AGNES,<br/>one of the<br/>Swiss<br/>networks</b>   | Swisstopo     | -                | The network was started in 1997, the swipos service is operational since 2001 |
| <b>SWISSAT,<br/>one of the<br/>Swiss<br/>networks</b> | SWISSAT AG    | Private          | 1999  |

| <b>Networks</b>       | <b>Number of stations</b>   | <b>Average distance between the stations</b> | <b>Operation hours</b>  | <b>Communication link between station and control centre</b>    |
|-----------------------|---|--|---|---|
| <b>APOS</b>           | More than 30  | 50 to 70 km                                  | This is in discussion   | Ethernet, Internet (Ntrip), Internet (VPN - under construction) |
| <b>FLEPOS</b>         | 38 in Flanders and 2 stations from 06-GPS   | 25-30 km                                     | 24 hours 7 days a week, helpdesk 5/7 from 8-16/17               | TCP/IP over Flemish government network                          |
| <b>WALCORS</b>        | 23 stations   | 35 km  | 24 hours 7 days a week, but monitored only during working hours | RS232 (own MUX network)   |
| <b>GPSNet.dk</b>      | 25 network-stations plus 1 single base station  | 60-70 km                                     | 24 hours 7 days a week  | Regular ADSL lines 256/256 MB                                   |
| <b>GPS-Referencen</b> | 59  | Approx. 45 km                                | 24 hours 7 days a week  | Will be using ADSL  |
| <b>GPSNet.fi</b>      | 76  | 50-100 km                                    | 24 hours 7 days a week  | ADSL lines  |
| <b>ASCOS</b>          | More than 180, many of them are SAPOS-stations  | 60-70 km                                     | 24 hours 7 days a week  | ISDN, X.25  |
| <b>SAPOS</b>          | 250-260. There is a co-operation with 06-GPS (4 stations), AGNES (5 stations) and APOS (4 stations) | 50-70 km                                     | 24 hours 7 days a week  | TCP/IP over different channels                                  |

| <b>Networks</b>                    | <b>Number of stations</b>   | <b>Average distance between the stations</b> | <b>Operation hours</b>  | <b>Communication link between station and control centre</b> |
|------------------------------------|---|--|---|--|
| <b>Ordnance Survey RTK Network</b> | 61  | About 70 km                                  | 24 hours 7 days a week  | TCP/IP over Ordnance Survey's wide area network.             |
| <b>06-GPS</b>                      | 23 stations in the network, 13 of them are in the Nederlands, 8 in Germany (SAPOS) and 2 in Flanders (FLEPOS) | About 70 km                                  | 24 hours, 7 days a week, with active monitoring during working hours    | Managed VPN from Dutch KPN. DSL or Frame Relay technique     |
| <b>SATREF</b>                      | 34  | 60-70 km                                     | 24 hours 7 days a week, errors only corrected during ordinary work time | Leased lines   |
| <b>SWEPOS</b>                      | SWEPOS consists of 73 stations. 50 of them are included in the Network-RTK service                            | 60-70 km                                     | 24 hours 7 days a week  | 128 kb leased line and 56 kb dial-up modem as backup         |
| <b>AGNES</b>                       | 29  | 50 km  | -   | -  |
| <b>SWISSAT</b>                     | 21 or 24  | -  | 24 hours 7 days a week  | Frame relay  |

### 3. Network design

| <b>Networks</b>                    | <b>Distribution channels</b>   | <b>Information channels</b>                             |
|------------------------------------|--|---|
| <b>APOS</b>                        | GSM and GPRS (in the near future)  | SMS is an option for the user at the time               |
| <b>FLEPOS</b>                      | GSM  | Website (status of stations), no individual messages    |
| <b>WALCORS</b>                     | GSM (DAB and IP under study)   | Helpdesk during working hours (Web and SMS under study) |
| <b>GPSNet.dk</b>                   | GSM, GPRS, NTRIP   | SMS, email, web   |
| <b>GPS-Referencen</b>              | GSM and GPRS   | SMS and web   |
| <b>GPSNet.fi</b>                   | GSM and GPRS   | Web server, text messages                               |
| <b>ASCOS</b>                       | GSM and GPRS   | Email, web, SMS, direct calls                           |
| <b>SAPOS</b>                       | GSM, IP-based channels (GPRS, UMTS, W-LAN) => NTRIP , 2m band radio                              | Telephone hotline, SMS, web presentation, newsletter    |
| <b>Ordnance Survey RTK Network</b> | GSM, although GPRS is being tested   | SMS   |
| <b>06-GPS</b>                      | 60 individual phone lines (GSM) and also Internet (NTRIP)  | Web and telephonic helpdesk.                            |
| <b>SATREF</b>                      | GSM  | SMS, web, phone (for special occasions)                 |
| <b>SWEPOS</b>                      | GSM and also one line for GPRS (will be more in the near future), radio (in the Gothenburg area) | SMS, web, helpdesk, email                               |
| <b>AGNES</b>                       | GSM and GPRS/NTRIP   | Hotline   |
| <b>SWISSAT</b>                     | GSM  | Email, SMS  |

| <b>Networks</b>                    | <b>Possibility for post processing</b>   | <b>Possibility for using Network DGPS</b> |
|------------------------------------|--|---|
| <b>APOS</b>                        | Yes. Availability: RINEX-files and Station-time-series on the web in the near future. The www.BEV portal is under construction | No  |
| <b>FLEPOS</b>                      | Yes, 10 s RINEX available for 60 days and 1 s RINEX available for 10 days  | No  |
| <b>WALCORS</b>                     | Yes (Applet Java)  | No  |
| <b>GPSNet.dk</b>                   | Yes, all data is available for 21 days. 30 s data will be available for years (for research etc)                               | Yes                                       |
| <b>GPS-Referencen</b>              | Yes, RINEX data is available on demand   | No  |
| <b>GPSNet.fi</b>                   | Yes, webserver   | Yes, a VRS DGPS service is available      |
| <b>ASCOS</b>                       | Yes  | Yes                                       |
| <b>SAPOS</b>                       | Yes  | No standard                               |
| <b>Ordnance Survey RTK Network</b> | Data is stored for 60 days for post processing   | No  |
| <b>06-GPS</b>                      | RINEX data 1 second interval from all stations, including possibility of VRS RINEX data  | No, but it is currently tested            |
| <b>SATREF</b>                      | Yes, the data is on disc for 14 days and can be ordered by email, fax or telephone   | Yes, the service DPOS                     |
| <b>SWEPOS</b>                      | Yes  | No, but tests are going on                |
| <b>AGNES</b>                       | Yes, RINEX data  | Yes, a VRS - DGPS service is available    |
| <b>SWISSAT</b>                     | Yes  | Yes                                       |

| <b>Networks</b>                    | <b>Brands of receivers</b>  | <b>Brands of antennas</b>  |
|------------------------------------|---|--|
| <b>APOS</b>                        | Leica 500 series,<br>Trimble NetRS                                  | Dorne Margolin Choke Ring,<br>Trimble Zephyr   |
| <b>FLEPOS</b>                      | Leica RS500/530   | Leica AT504  |
| <b>WALCORS</b>                     | Leica RS500   | Leica AT504  |
| <b>GPSNet.dk</b>                   | Trimble 4700  | Micro Centered L1/L2<br>antennas with groundplane  |
| <b>GPS-Referencen</b>              | Typically Leica, but<br>Ashtech is also in use                      | Typically Leica, but Ashtech is<br>also in use   |
| <b>GPSNet.fi</b>                   | 70% Trimble<br>5700/NetRS, some<br>Ashtech, Javad, Leica            | 70% Zephyr geodetic/choke<br>ring, some Ashtech, Javad,<br>Leica                             |
| <b>ASCOS</b>                       | Topcon, Trimble, Leica  | Topcon, Trimble, Leica   |
| <b>SAPOS</b>                       | Many different  | Many different   |
| <b>Ordnance Survey RTK Network</b> | Leica System 500  | Leica AT504 mostly, but also<br>some Ashtech 700936E with<br>radome                          |
| <b>06-GPS</b>                      | A combination of<br>Trimble, Topcon, Leica<br>and Novatel equipment | See left, mostly individually<br>calibrated by Geo++   |

## 4. User distribution

| <b>Network</b>        | <b>User fees for Network RTK data</b>  | <b>User fees for Network RTK distribution</b>   | <b>User fees for post processing</b>                                       |
|-----------------------|--|---|--|
| <b>APOS</b>           | To be determined   | In discussion   | In discussion  |
| <b>FLEPOS</b>         | Free of charge   | Depends on the contract with GSM-provider of the user   | Free of charge   |
| <b>WALCORS</b>        | Free of charge   | Free  | Free   |
| <b>GPSNet.dk</b>      | 13075 DKK per year in annual fee + 1.29 DKK per minute including GSM or annual fee + 0.19 DKK per minute for the first hour and 0.99 DKK per minute the rest of the day + own distribution (GSM or GPRS) | See the previous column   | 8000 DKK per year for 5 s phase data                                       |
| <b>GPS-Referencen</b> | 12000 DKK in annual subscription   | Current GSM-price is 0,60 DKK per minute  | At moment free   |
| <b>GPSNet.fi</b>      | 3500-2600 Euro/year (1-5 year subscription)  | The user pay its own GSM/GPRS costs   | 2500 Euro/year (all data included: single station/VRS postprocessing data) |
| <b>ASCOS</b>          | Between 0.08 and 0.70 Euro/minute, depending on expected sales   | GSM: included (0.11 Euro or more), Internet/GPRS: not included (0.08 Euro or more)                                  | 15 Euro/hour/station   |
| <b>SAPOS</b>          | 0.10 Euro per minute   | Depends on the contract with the GSM provider of the user. Best conditions are about 6 cent a minute + basic charge | 0.20 Euro per minute for 1 s RINEX   |

| <b>Network</b>                     | <b>User fees for Network RTK data</b>   | <b>User fees for Network RTK distribution</b>  | <b>User fees for post processing</b>  |
|------------------------------------|---|--|---|
| <b>Ordnance Survey RTK Network</b> | To be determined  | To be determined   | To be determined  |
| <b>06-GPS</b>                      | 5000 Euro/year + 0.25 Euro/ minute or 450 Euro/month plus 0.25 Euro/ minute or 1.25 Euro/minute and no subscription | Every customer provides his own means of communication   | RINEX 1 second: 20 Euro per hour per station; RINEX 5 seconds: 10 Euro per hour per station. VRS data on request.   |
| <b>SATREF</b>                      | 30000 NOK/year in subscription  | The users must have a subscription from a telecompany (Netcom or Telenor)  | 500 NOK per day and station   |
| <b>SWEPOS</b>                      | 15000 SEK per year or 5000 SEK per year + 5 SEK per minute  | The user pay its own communication cost, but can get a special offer of 0.53 SEK/min + 0.22 SEK/call + 48 SEK / month through our deals with the telephone company | 500 SEK per day or 10000 SEK per year for data from five stations, 30000 SEK per year for data from all stations There is also an automated Computation Service which is included in the cost |
| <b>AGNES</b>                       | 3000 CHF per year for the first subscription, 1000 CHF for every other subscription 0.70 CHF per minute             | The user pay its own communication cost  | RINEX, 1 second data 60 CHF per hour. Many other intervals (2, 5, 10, 15, 20, 30 and 60 s) are also available (costs 50, 40, 35, 30, 25, 20 and 15 CHF resp./ hour).                          |

| <b>Network</b> | <b>User fees for Network RTK data</b>  | <b>User fees for Network RTK distribution</b> | <b>User fees for post processing</b> |
|----------------|--|---|--------------------------------------|
| <b>SWISSAT</b> | 3000 CHF for the first rover, 1000 CHF for every other subscription, 3900 CHF for the first GPS+GLONASS rover, 1300 CHF for every other subscription 0.60 CHF per minute | The user pay its own communication cost       | Yes                                  |

| <b>Network</b>        | <b>No of users</b>        | <b>Users per nat stn</b> | <b>Distribution of users</b>   | <b>Typical applications today and in the future</b>            |
|-----------------------|---------------------------|--------------------------|--|--|
| <b>APOS</b>           | At moment only test users | -                        | -  | RTK-VRS for cadastre, high accuracy applications               |
| <b>FLEPOS</b>         | 170                       | 4.47                     | Surveyors - mainly governmental, consultancy and utility firms   | Mainly surveying activities                                    |
| <b>WALCORS</b>        | About 180                 | 7.83                     | 40% public (connection time)   | Survey, INS-GPS, machine guidance, permanent object monitoring |
| <b>GPSNet.dk</b>      | 150                       | 5.77                     | -  | -  |
| <b>GPS-Referencen</b> | Approx. 190               | 3.22                     | Utility companies, chartered surveyors, municipalities, contractors  | Surveying for non-surveyors, GIS, field-to-office              |
| <b>GPSNet.fi</b>      | About 180                 | 2.37                     | Many types of users like governmental/municipality organisations, cities, power utility companies, telecommunication companies, surveying and construction companies, GIS users, National Land Survey etc. | All types of surveying and GIS applications, machine control   |
| <b>ASCOS</b>          | Hundreds                  | -                        | Different, mainly private companies  | Surveying, machine guidance                                    |

| <b>Network</b>                     | <b>No of users</b>  | <b>Users per nat stn</b> | <b>Distribution of users</b>  | <b>Typical applications today and in the future</b>  |
|------------------------------------|---|--------------------------|---|--|
| <b>SAPOS</b>                       | About 1500  | 6.00                     | 70% governmental organisations, 30% private companies                         | Different surveying activities (real estate cadastre, GIS applications, ...)   |
| <b>Ordnance Survey RTK Network</b> | At moment the service is available for 150 surveyors        | 2.46                     | At moment only users from Ordnance Survey                                     | Currently the sole application is for cartographic data collection, but when the public service is developed they expect a wide range of application from engineering to asset management / tracking |
| <b>06-GPS</b>                      | Over 220 registered rovers from about 120 different clients | 16.92                    | Governmental: 30%; Municipality: 5%; Consultancy firms: 40%; Contractors: 15% | All types of surveying and staking out. From cadastral applications to hydrography, archaeology and even police work (registration of accidents)   |
| <b>SATREF</b>                      | 119   | 3.50                     | -   | Surveying for municipalities, governmental use, for electricity supply, private contractors  |
| <b>SWEPOS</b>                      | 306   | 6.12                     | Municipalities 50%, governmental companies 15%, consultant agencies 35%       | Different types of surveying, machine guidance   |
| <b>AGNES</b>                       | 100   | 3.33                     | Official surveyors, municipalities, construction, GIS                         | All types of surveying, construction, geodynamical movements, weather predictions etc  |
| <b>SWISSAT</b>                     | ?   | ?                        | Privately owned companies   | All kind of surveying applications   |

## 5. Future plans

| <b>Networks</b>                    | <b>Plans for the near future</b>  |
|------------------------------------|---|
| <b>APOS</b>                        | GPRS as distribution channel  |
| <b>FLEPOS</b>                      | Exchanging 2-3 stations with WALCORS; GPRS as distribution channel  |
| <b>WALCORS</b>                     | Stations exchange with SAPOS and FLEPOS (6 stations); DAB and IP as distribution channels; Object monitoring; Status to users on the field  |
| <b>GPSNet.dk</b>                   | -   |
| <b>GPS-Referencen</b>              | New products with corrections of varying accuracy   |
| <b>GPSNet.fi</b>                   | Covering whole Finland summer 2005  |
| <b>ASCOS</b>                       | Extension (neighbouring countries); UMTS as distribution channel; Many more plans   |
| <b>SAPOS</b>                       | New data format (RTCM 3,0) with network messages  |
| <b>Ordnance Survey RTK Network</b> | To cover England, Wales and the majority of Scotland by end of October 2005. Further plans for the service-side of the network depend on the final form of the public service and the interests of any third parties involved |
| <b>06-GPS</b>                      | Network DGPS is currently tested under VRS via NTRIP. NTRIP/Internet will be used more and more   |
| <b>SATREF</b>                      | Extensions; Exchanging data with SWEPOS; GPRS, FM/DARC, satellite telephone as distribution channel   |
| <b>SWEPOS</b>                      | Extensions; Exchanging data with SATREF; FM/DARC, satellite telephone as distribution channel, Network DGPS   |
| <b>AGNES</b>                       | 5 SAPOS-stations and 4 APOS-stations already integrated in the network; Integration of 4 stations from IREALP network in Lombardy; Construction of 1 new Swiss station  |
| <b>SWISSAT</b>                     | Extensions; New distribution channels   |

## **6. Currencies**

All prices are mentioned in the currencies used in the country providing the service. To make the following table easier to read, the currencies have been translated into Euro (€).

Currency status April 13, 2005:

1 DKK = € 0.134272

1 CHF = € 0.645360

1 NOK = € 0.122293

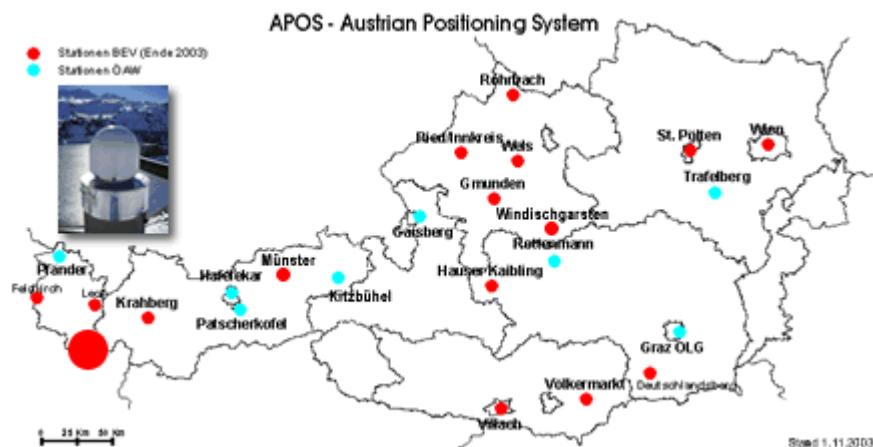

1 SEK = € 0.109384

|               | Service            | Subscription per year (€) | GSM fee per minute (€)                    | For RINEX 1 s data per hour/station (€) | For RINEX 1 s data per year (€) |
|---------------|--------------------|---------------------------|---|---|---------------------------------|
| Austria       | APOS               | -                         | -   | -                                       | -                               |
| Belgium       | FLEPOS             | 0                         | t.o.                                      | 0                                       | 0                               |
| Belgium       | WALCORS            | 0                         | 3.75 per month + 0.119 per min + 21 % tax | 0                                       | 0                               |
| Denmark       | GPSNet.dk          | 1756                      | 0.17                                      | -                                       | 1074 for 5 s data               |
| Denmark       | GPS-Referencen     | 1611                      | t.o.                                      | 0                                       | 0                               |
| Finland       | GPSNet.fi          | 3500                      | t.o.                                      | -                                       | 2500                            |
| Germany       | ASCOS              | -                         | 0.08 - 0.70                               | 15                                      | -                               |

| Holland       | 06-GPS             | 5000                      | 0.25 + 0.09 t.o.                          | 20                                      | -                               |
| Norway        | CPOS (SATREF)      | 3669                      | t.o.                                      | 61 per day                              | -                               |
| Sweden        | SWEPOS             | 1531                      | 0.06 per min t.o. + 5.25 per month t.o.   | 55 per day / 5 stations                 | 3282 / 5 stations               |
| Switzerland   | swipos (AGNES)     | 1936                      | 0.45 + t.o.                               | 39                                      | -                               |
| Switzerland   | SWISSAT            | 1936                      | 0.39 + t.o.                               |   |                                 |

Abbreviation in the table: t.o. = to operator.

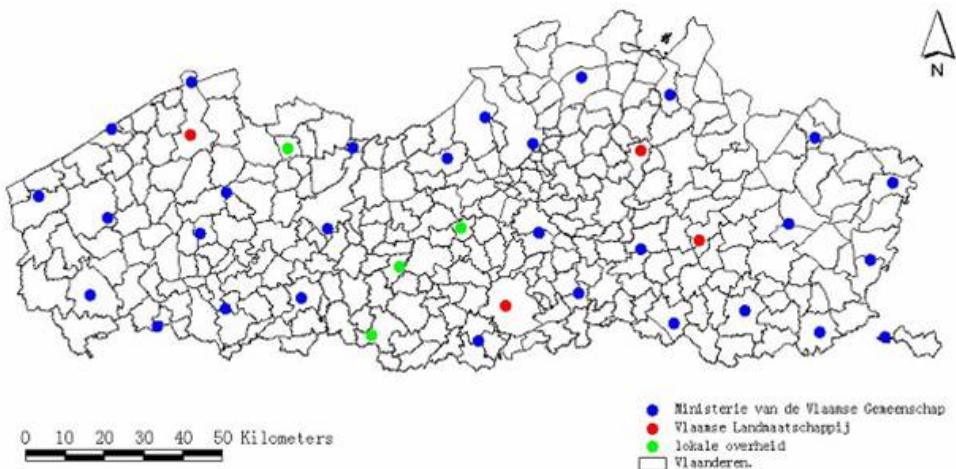

## 7. Pictures

### 7.1 APOS

The APOS network and one APOS station.

## 7.2 FLEPOS

The FLEPOS network.

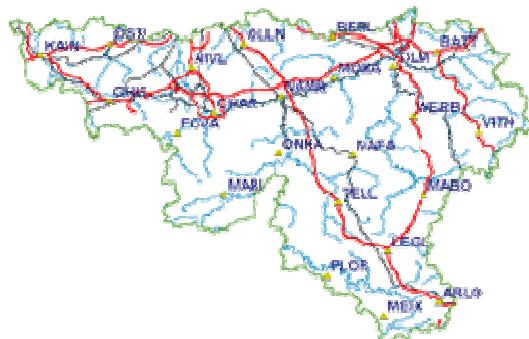

A FLEPOS station.

The inside of a FLEPOS station.

## 7.3 WALCORS

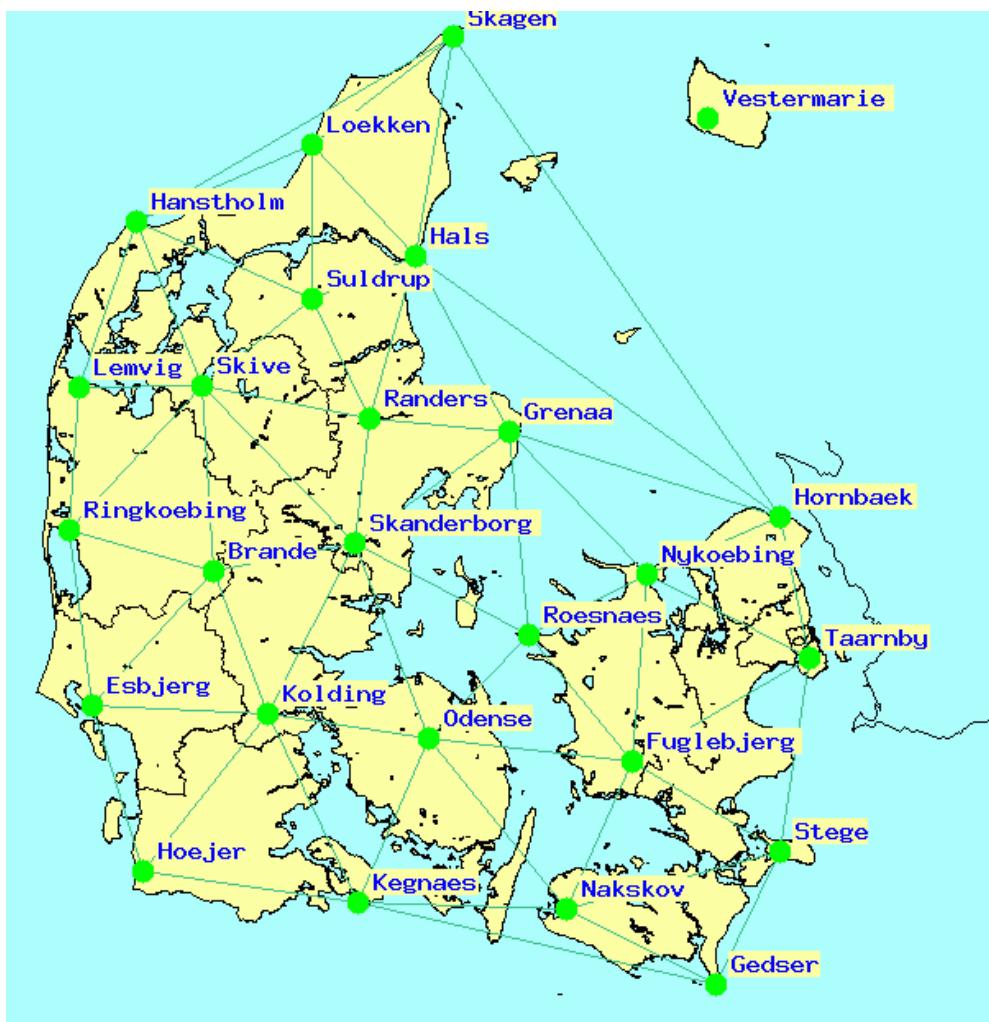

The WALCORS network.

A WALCORS station.

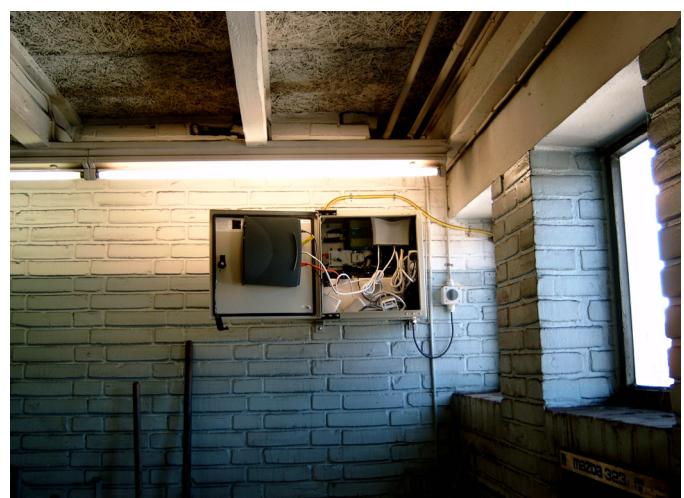

## 7.4 GPSNet.dk

The GPSNet.dk network.

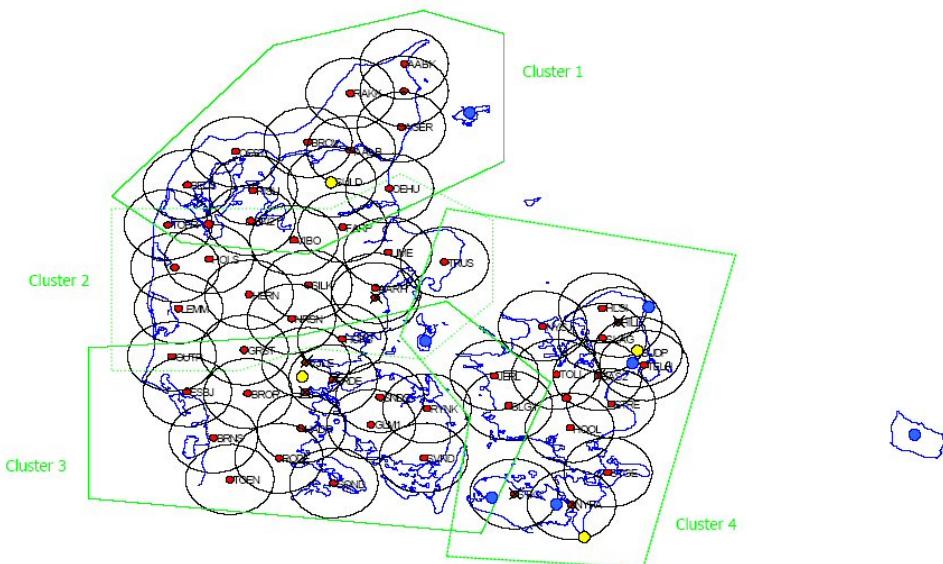

A GPSNet.dk station.

The inside of a GPSNet.dk station.

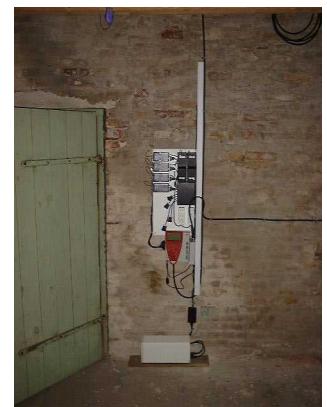

## 7.5 GPS-Referencen

The GPS-Referencen network.

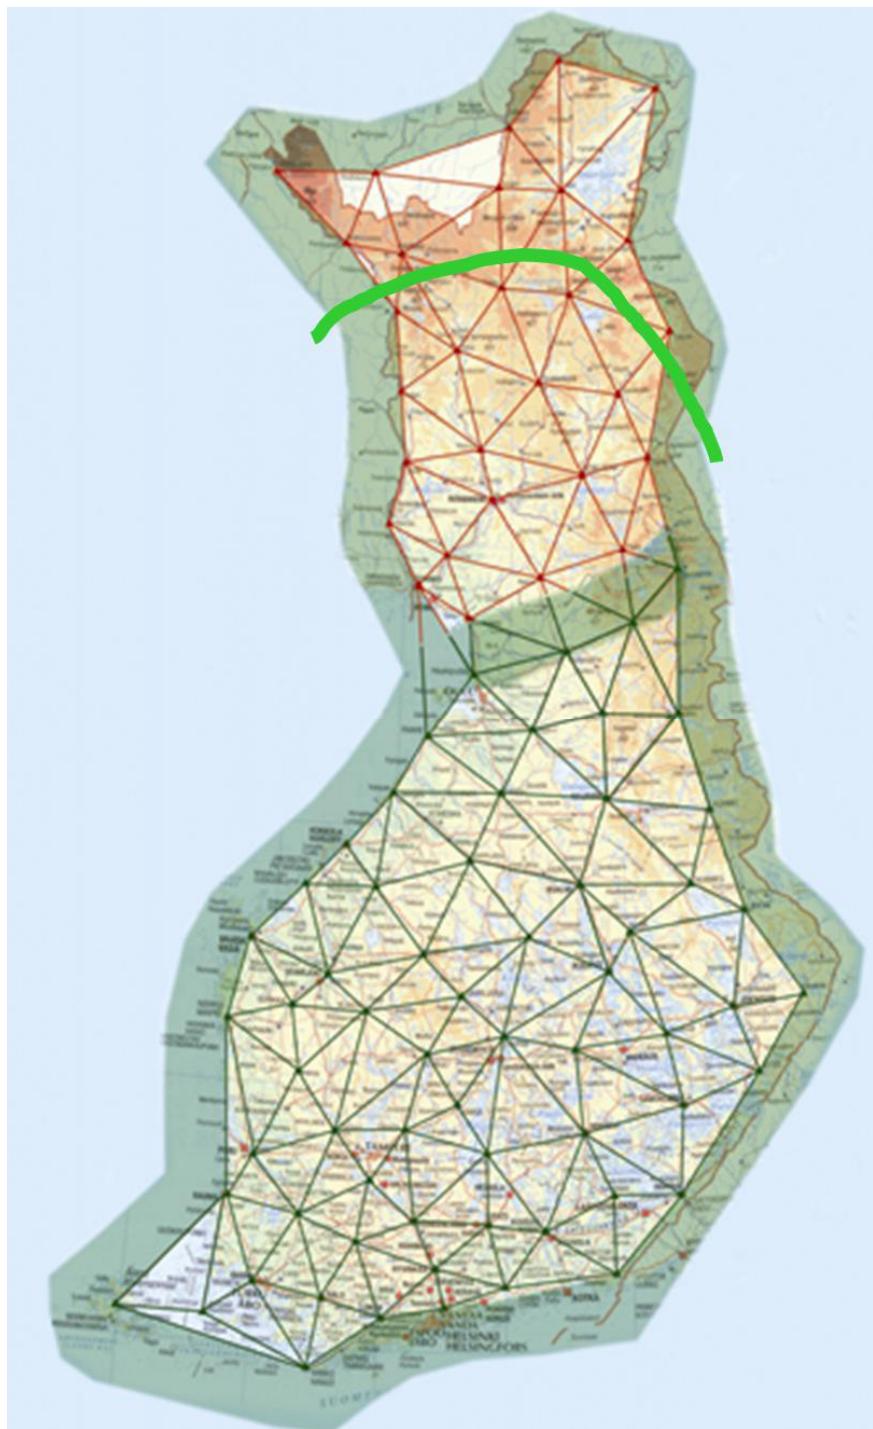

A GPS-Referencen station.

The inside of a GPS-Referencen station.

## 7.6 GPSNet.fi

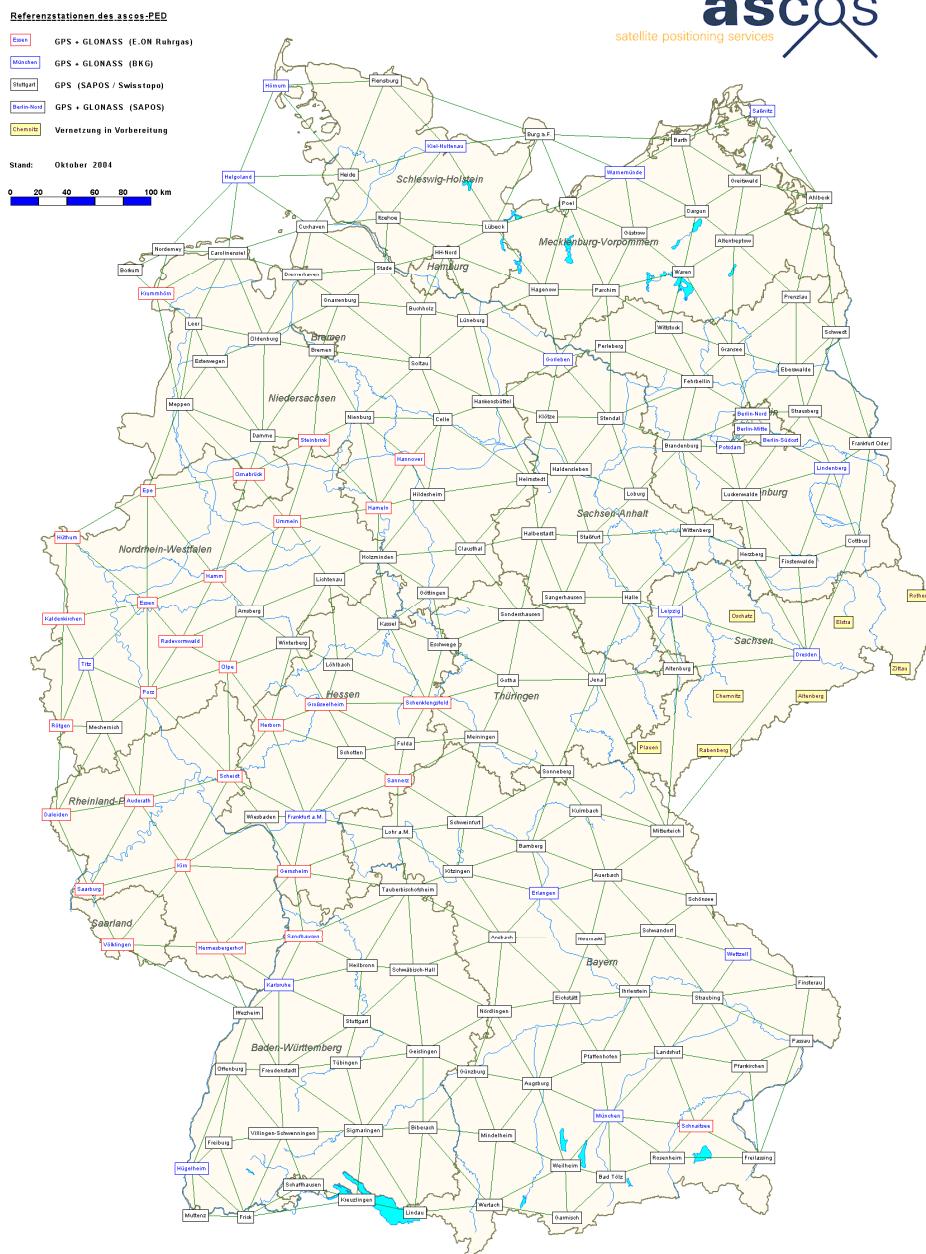

The GPSNet.fi network. Above the green line are planned stations and below the line are the present stations.

A GPSNet.fi station.

## 7.7 ASCOS

Deutschlandweit messen.

The ASCOS network.

An ASCOS station.

## 7.8 SAPOS

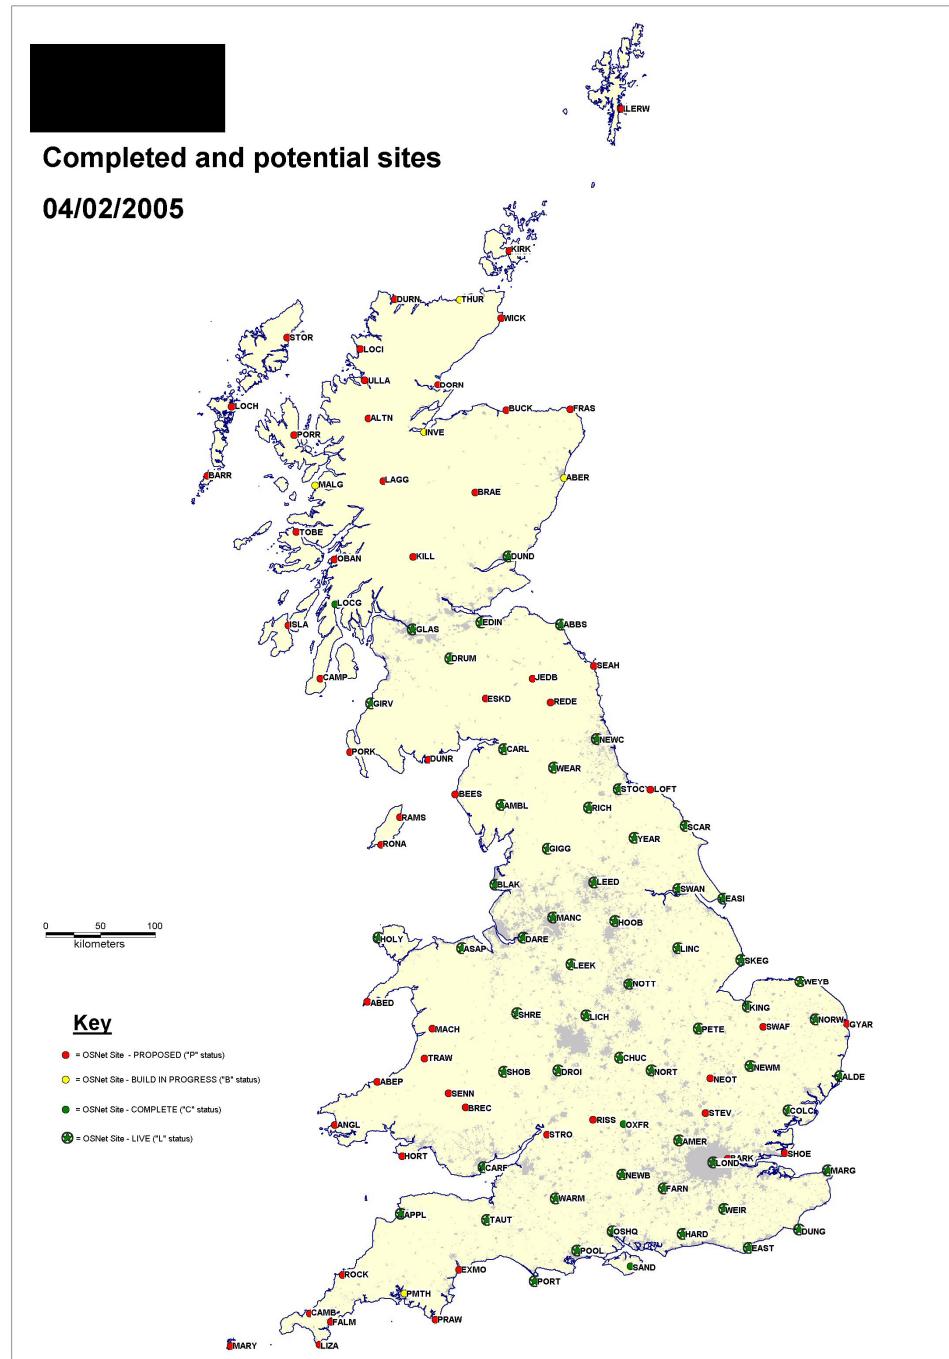

## The SAPOS network.

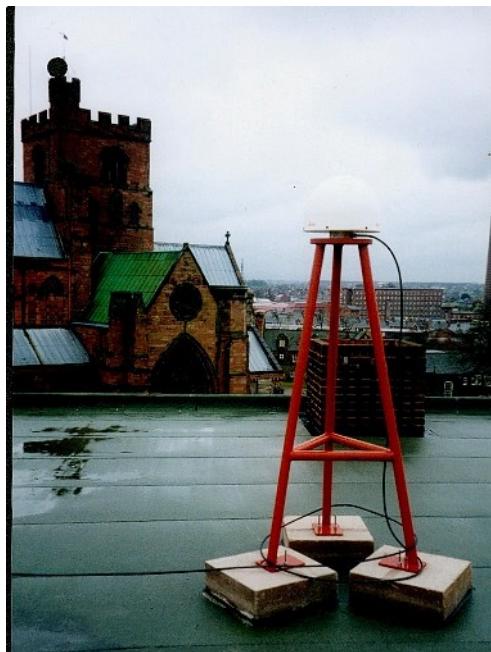

A SAPOS-station in Bavaria.

## 7.9 Ordnance Survey RTK Network

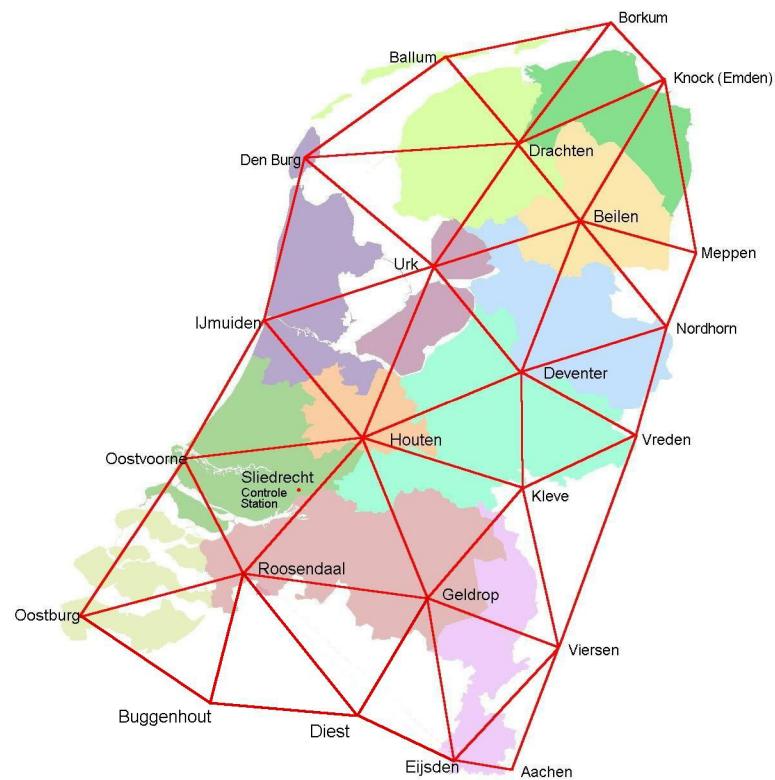

The Ordnance Survey RTK network, with present and planned stations.

An Ordnance Survey RTK Network station

## 7.10 06-GPS

The 06-GPS network

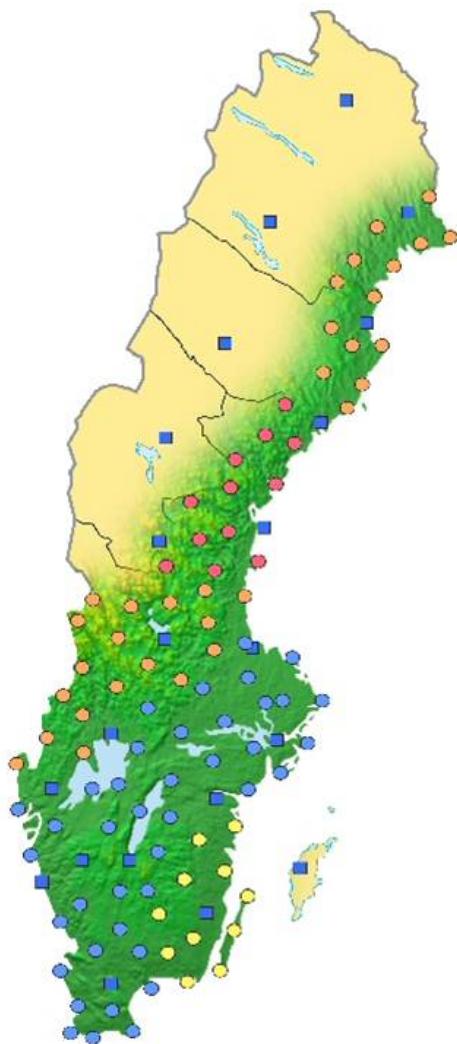

The 06-GPS station Houten

## 7.11 SATREF

The CPOS network. SATREF stations are evenly distributed through the whole of Norway.

## 7.12 SWEPOS

The blue and yellow dots are showing the position of the existing stations. The orange and red dots are planned stations.

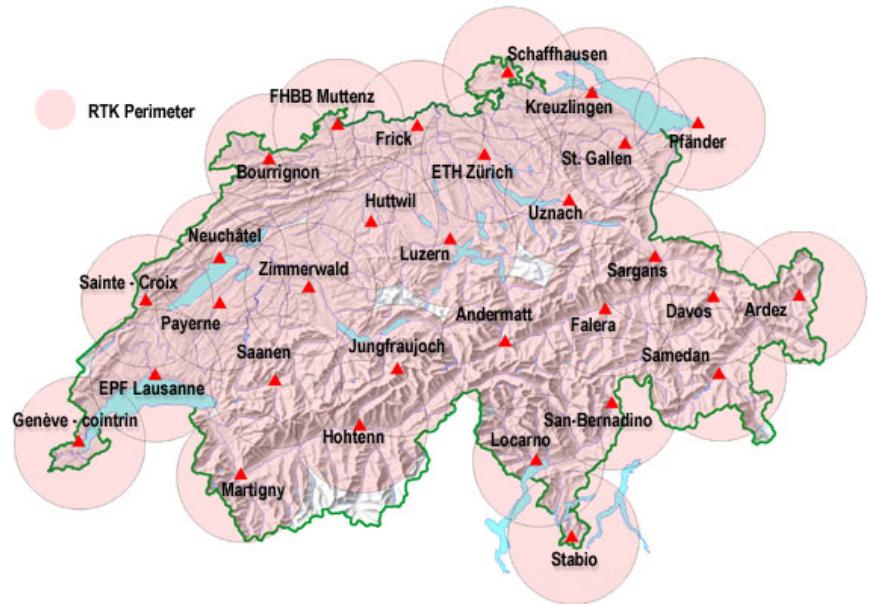

The SWEPOS station Visby, one of 23 stations with the antenna mounted on bedrock (Blue squares on the map + two blue dots).

The SWEPOS station Skillinge, one of the simplified stations with the antenna mounted on the building.

## 7.13 AGNES

The AGNES network

The AGNES station in Davos

## 7.14 SWISSAT

The SWISSAT network

The SWISSAT station in Interlaken

## **8. Contact persons for the listed networks**

The persons listed below have answered the questionnaire and they have also checked the information about their network in this report.

06-GPS: Jean-Paul Henry, [info@06-gps.nl](mailto:info@06-gps.nl)

APOS: Ernst Zahn, [Ernst.Zahn@bev.gv.at](mailto:Ernst.Zahn@bev.gv.at)

ASCOS: Johannes Piechel, [Johannes.Piechel@eon-ruhrgas-service.de](mailto:Johannes.Piechel@eon-ruhrgas-service.de)

FLEPOS: Wim Van Huele, [Wim.VanHuele@vlg.be](mailto:Wim.VanHuele@vlg.be)

GPSNet.dk: Henrik Gosvig Thomsen, [hgt@trimblecenter.dk](mailto:hgt@trimblecenter.dk)

GPSNet.fi: Seppo Tötterström, [Seppo.Totterstrom@geotrim.fi](mailto:Seppo.Totterstrom@geotrim.fi)

GPS-Referencen: Klaus Juul Sørensen, [knjs@tdc.dk](mailto:knjs@tdc.dk)

Ordnance Survey RTK Network: Mark Greaves,  
[Mark.Greaves@ordnancesurvey.co.uk](mailto:Mark.Greaves@ordnancesurvey.co.uk)

SAPOS: Matthias Stronk, [Matthias.Stronk@LGN.Niedersachsen.de](mailto:Matthias.Stronk@LGN.Niedersachsen.de)

SATREF: Per Erik Opseth, [Per.Erik.Opseth@statkart.no](mailto:Per.Erik.Opseth@statkart.no)

SWEPOS: Anders Frisk, [Anders.Frisk@lm.se](mailto:Anders.Frisk@lm.se)

Swipos (AGNES): Simon Grünig, [Simon.Gruenig@swisstopo.ch](mailto:Simon.Gruenig@swisstopo.ch)

SWISSAT: Zdenko Kurtovic, [Zdenko.Kurtovic@swissat.ch](mailto:Zdenko.Kurtovic@swissat.ch)

WALCORS: Jean-Pierre Dejardin, [gps@met.wallonie.be](mailto:gps@met.wallonie.be)

## **9. Acknowledgement**

Thanks to all of you who answered the questionnaire and to Bo Jonsson for giving me the assignment to make a report about this and for giving me pieces of advice during the editing.
